

CLAIMS

1. (withdrawn)

2. (Currently Amended) Torque releasing mechanism for fitness equipment, comprising:

- 5 a. An eye hook piece having an eye for fastening cable and a bolt body with
 threaded end;
- b. A top cap piece having a center aperture allowing said bolt body to be slidably
 inserted;
- c. A washer piece for insertion into said bolt body;
- 10 d. A nut piece for securing said washer piece to the threaded end of said bolt
 body;
- e. A bottom piece for receiving a grab bar of a fitness equipment; and,
- f. A locking pin of suitable rigid material for connecting said bottom piece to
 said top cap piece by inserting through overlapping holes on side panels of top
15 cap piece and bottom piece, whereby said nut and washer are fastened to said
 eye hook piece and are situated in the space between the grab bar and said top
 cap piece.

3. (Currently Amended) Torque releasing mechanism for fitness equipment, comprising:

- 20 a. An eye hook piece having an eye for fastening cable and a bolt body with
 threaded end;

- 5
- b. A top cap piece having a center aperture allowing said bolt body to be slidably inserted, said top cap piece has circular shape with thread lines along the inside wall;
 - c. A washer piece for insertion into said bolt body;
 - d. A nut piece for securing said washer piece to the threaded end of said bolt body;
 - e. A bottom piece for receiving a grab bar of a fitness equipment, said bottom piece has circular shape with thread lines along its outside wall and sized to be fit into and tightened with the inside wall of said top cap piece, whereby said
- 10
- nut and washer are fastened to said eye hook piece and are situated in the space between the grab bar and said top cap piece.
